(54) Title: GROWTH FACTOR BINDING MOLECULES

(57) Abstract: Growth factor binding molecules having a plurality of peptide loops attached to a non-peptide organic scaffold such as a calixarene, preferably having pseudo-six amino acid peptide loops with four amino acid sidechains. The growth factor binding molecules specifically bind various growth factors and are suitable for treating a subject having tumors or restinosis. In one embodiment a platelet-derived growth factor binding molecule is disclosed that is used to inhibit tumor growth and angiogenesis in solid tumors.
